Edu-Science's Mission:

Exploration
Drives Innovation

STEM

Having Fun
in the Park

During the past years, Edu-Science did not only accelerate with awards and innovation, but also achieved challenges that kids deserve to have. As the kids did not want to stop learning!

The kids explored innovation through STEM (Science, Technology, Engineering and Math). **My First Engineering Series** utilizes the skills of both science and technology. Our robot **C.H.R.1.S** involved everyday mathematics and reasoning. While **My First Recycling Game** and **Tengy Tower** are preparing global citizens and future architects.

Just to name a few humble awards, Edu-Science has been recognized by industry experts with: HK Smart Design Awards, Made by HK Toys Awards, Japan Digital Echeon Award, Les Trophées De L'Innovation, Toy of the Year Award and HK Awards for Industry Consumer Product Design Award.

Edu-Science is proud to engage in love, uniqueness, engagement, character formation, social responsibility, creativity as we navigate through the critical journey of the 21st century - 2001 to 2100!

The Edu-Science Innovators

My First Engineering Series

My First Engineering Series brings together maths, construction and science in a hands-on way when children build their own toys.

Recycling Game

HKSDA 2022
SILVER
CORPORATE

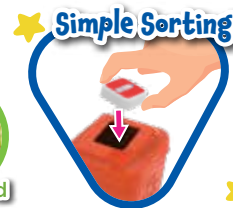

Each day we produce wastes. Many of them are recyclable and are valuable resources. This is a **cooperative game**. Your mission is to pick up wastes from different places and recycle them!

Collect and recycle as many waste tokens as possible.

If players recycled all waste tokens before the landfill is full, then the game ends. You've helped the community to recycle valuable resources. All players win! Congratulations!

If there are 8 tokens in the landfill, the game ends and the recycle mission fails.

CHRIS[®]

Coding Home Robot 1st Set

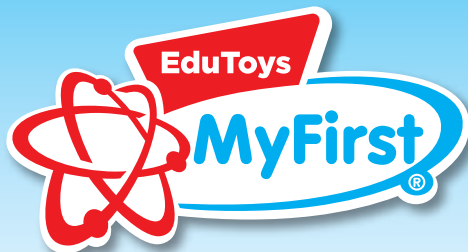

* These are promotional pictures.
The actual product must only be used at home on a flat, dry and smooth surface.

CHRIS is the first coding robot designed for children age 3+.

CHRIS teaches children the basics of coding, while incorporating problem-solving and creativity.

Children will be delighted to see their coding skills bring **CHRIS** to life and keep company, as **CHRIS** navigates his surroundings.

You can even use the coding blocks to create your own custom path for **CHRIS**. There are endless possibilities for family fun!

THE TENGY TOWER

Use Only
WIRES
For Support!

GM342 6+

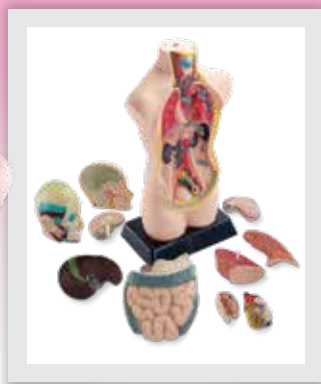

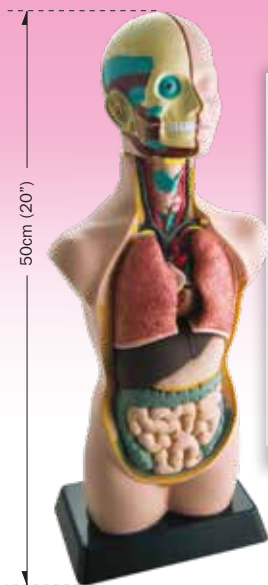

Seemingly defying gravity, this structure can be built one layer on top of another, with just strings and loose parts. But, what's really going on here?

This is built using a structural principle called tensional integrity (TENSEGRITY for short), where all the strings are under tension due to the distribution of mass in the system.

Space Science

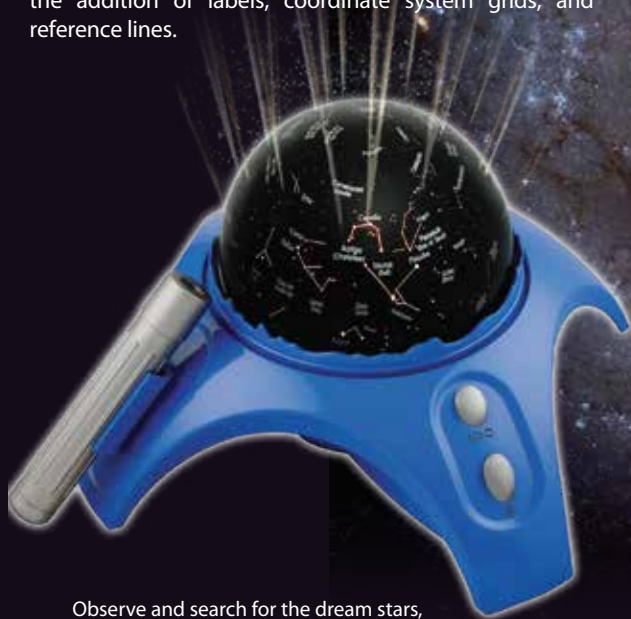

CyberSky is an entertaining, and educational astronomy program that transforms your personal computer into your personal planetarium.

CyberSky provides an excellent way to learn about astronomy and to explore the wonders of the sky visible in the distant past, the present, and the far off future. It displays accurate charts of the sky as seen from any location on the earth.

Sky charts can include stars, constellations, deep sky objects, and solar system objects, and can be enhanced by the addition of labels, coordinate system grids, and reference lines.

CyberSky Program

Observe and search for the dream stars, planets and constellations in the comfort of your home.

Da Vinci Inventions

*Leonardo
Da Vinci*

(1452 – 1519)

Artist, scientist, inventor, and archetypal Renaissance man, Leonardo da Vinci, offered the world glimpses of the distant future through his awe-inspiring designs. His limitless curiosity was the impetus for his pursuit of creativity and genius.

Leonardo da Vinci's design for a mechanical drum. The drum is mounted on a cart equipped with an axle and wheels. When pulled by its handle, the gears turn the two lateral drums, which are fitted with peals. The peals have a total of ten drumsticks that beat them to the large drum.

DISCOVER THE SECRETS OF CELESTIAL BODIES

Experiment Telescope

GK004 8+

- Fit the convex lens onto the telescope, and it's just like the one invented by German astronomer Johannes Kepler!
- Fit the convex and concave lenses onto the telescope, and it's just like the one invented by Italian scientist Galileo Galilei!
- Assembling the lenses will teach you about how light travels. Experiment with making a telescope and a microscope using convex and concave lenses.
- Science guide included

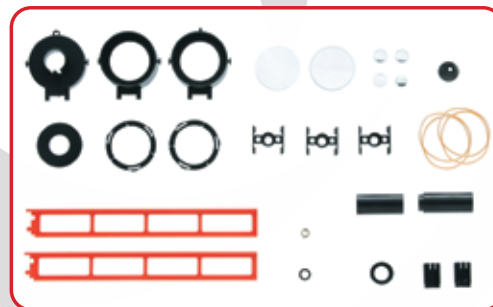

Assemble four convex lenses to make a high-powered "JR. SCIENTIST" telescope.

Let's probe the mystery of star

GK022 8+

Mini Rhinoceros has excellent connections between crank shaft and every part enabling each leg to move smoothly.

It has a very interesting mechanism: blowing into the fan makes the animal start walking against the wind.

The wind power is conveyed to the legs by 3 gears.

Enjoy the wonderful speed of Mini Rhinoceros!

- Science guide included
