CyberSky CD ROM Program

CyberSky is an entertaining, and educational astronomy program that transforms your personal computer into your personal planetarium.

CyberSky provides an excellent way to learn about astronomy and to explore the wonders of the sky visible in the distant past, the present, and the far off future. It displays accurate charts of the sky as seen from any location on the earth.

Sky charts can include stars, constellations, deep sky objects, and solar system objects, and can be enhanced by the addition of labels, coordinate system grids, and reference lines.

Education

■ AR Education

Augmented reality (AR) is a live direct or indirect view of a physical, real-world environment whose elements are augmented (or supplemented) by computer-generated sensory input such as sound, video, graphics or GPS data. Source: From Wikipedia, the free encyclopedia

Edu-Science imposes educational contents on screen embedded with fun learning graphics and texts that, when scanned by an AR device (smart phone, iPhone and iPad) produces supplementary information to the users.

We have turned a couple of Edu-Toy's hot sellers into interactive AR products namely

- Human Anatomy AR
- Globe Explorer AR

These new AR products will be ready to ship in the second quarter of 2017. Please don't hesitate contacting us for information on how we can tailor one for your distributing territories.

Da Vinci Inventions

*Leonardo
Da Vinci*

(1452 – 1519)

Artist, scientist, inventor, and archetypal Renaissance man, Leonardo da Vinci, offered the world glimpses of the distant future through his awe-inspiring designs. His limitless curiosity was the impetus for his pursuit of creativity and genius.

Leonardo da Vinci's design of a mechanical cart equipped with an arm and a drum. When pulled by its handle, the gears turn the two lateral drums, which are fitted with peas. The peas move a total of ten drumsticks that beat them to the large drum.

Electro-Mag Series

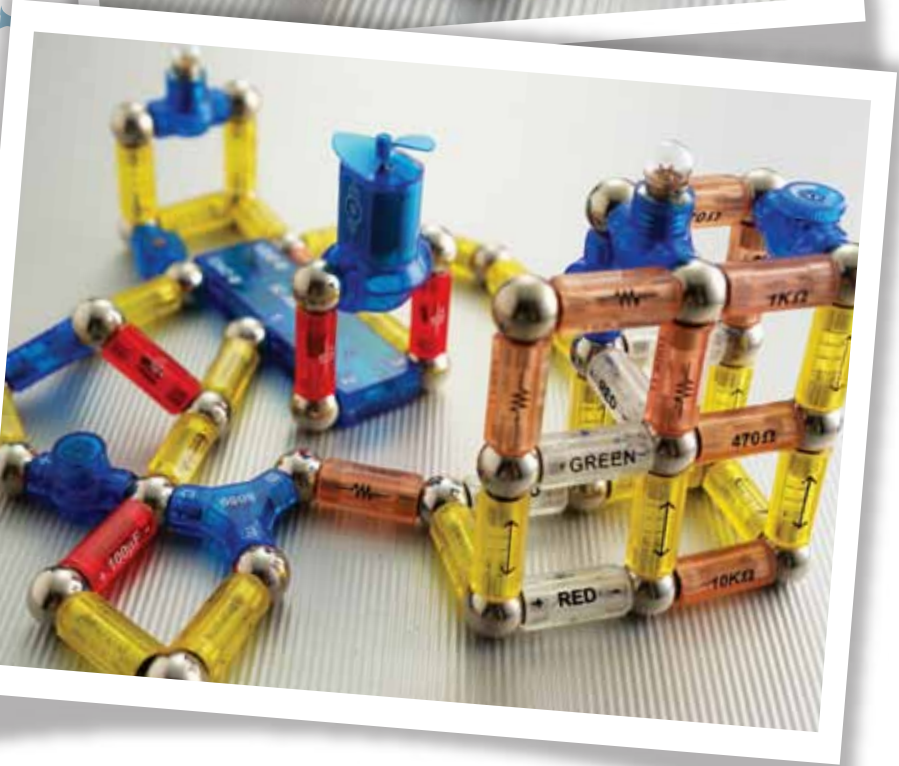

Electro-Mag is designed for children from the age of 8+.

The series includes three different kits for building Electronic Circuits. Use a very simple system of magnets, steel balls and electronic components to build three dimensional circuits, as well as standard circuits.

Each of these kits will independently link up to any other magnet kit on the market.

Build various structures such as towers, houses and geometric shapes incorporating the original circuits.
